Loading Your Free Coloring eBook on an Android Device

A Little Introduction

I am delighted that you have chosen to collect and use this free coloring eBook, and I sincerely hope it brings joy to you and your child.

Please be aware that **this coloring book is an eBook (ePub3 format),** *not* **an app**. This means it has been created to a recognized [international standard](#) and will be opened, on your device, with an ePUB3 reading app. (I suggest Gitden Reader but more on that shortly.)

I have created these instructions to help guide you through the process of loading and using this free gift as quickly and painlessly as possible. However, I must stress that **I do not have the resource to provide any kind of direct support for free gifts**.

Before you begin, **please read through** *all* **of these instructions first**, and if you feel uncomfortable performing them yourself, may I kindly suggest that you ask a friend or relative to assist you. (But please read through first, **you might be surprised at how simple it is 😃**.)

Installing an ePub3 Reader

You will need an ePub3 reader to open this eBook, and I suggest Gitden Reader for the following reasons:

1. It is completely free.
2. It doesn't display annoying ads.
3. It is very well rated on Google Play.
4. It supports the advanced features of ePub3 standards well enough for this coloring book to work. (Many Android ePub3 readers don't.)

If this sounds good, go to [Google Play Gitden Reader page](#) to install the app. (P.S. If for any reason this link doesn't work (like it's gone out of date or something) just go to [Google Play](#) and type "Gitden Reader" into the search.

Gitden Reader is very intuitive to use, provides in-app help, and an online [Gitden Reader manual](#), so I won't be going into how to use it here.

Important: If you decide to use another ePub3 reader, please be aware that you may receive pop-up ads (that I assure you don't come from me), and I can't guarantee that it will
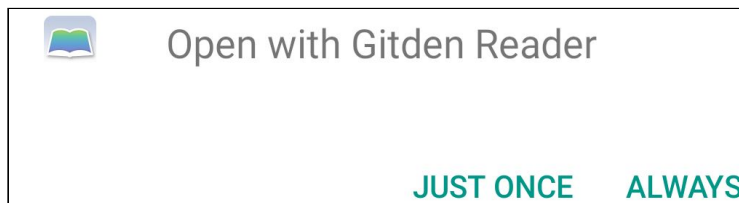

support all the features of the coloring book. In fact, on some readers, it won't work at all because they only provide minimal support of the ePub3 standard.

Fetching Your Free Book

👍 **You only need to perform this once on your device.**

Please note: The process may differ slightly, depending on your version of Android, but these are the basic steps.

1. From the download page (the page you navigated to from the link in the email I sent you), click the link titled "**Download coloring eBook**".
2. Android invite you to "**CANCEL**" or "**DOWNLOAD**".
3. Click "**DOWNLOAD**".
4. An onscreen "Downloading…" message will briefly appear and, after a short while (depending on the speed of your network connection), the download will complete, and you will be displayed a downloaded message accompanied by an "**OPEN**" option.
5. Click "**OPEN**".
6. A pop-up, similar to the following, will appear:

   Open with Gitden Reader

   JUST ONCE   ALWAYS

7. Clicking either link will open the book ("**JUST ONCE**" will result in you being asked again, in the future, should you download an open another ePub3 file. "**ALWAYS**" will make it your default reader and result in you not being asked next time.)
8. The reader will open, and after a short delay, your new coloring book will open.
9. The coloring book will remain in your reading app (Gitden) library and be available every time you open the app.
10. Pat yourself on the back. That wasn't so bad! 😃

The coloring book is extremely intuitive to use, so...

HAVE FUN!

Fable

P.S. I have been asked if it is possible to save pictures or print from the coloring book. Those feature are not currently available, but (should your child create something that would put Picasso to shame) you can always screenshot your device and keep the digital copy and even send that to your printer. A quick Google search will explain how to screenshot, etc.
